Chapter 1

Functions and Graphs

Checkpoint Solutions

Checkpoint 1.1: Evaluating Functions

Instruction

For the function $f(x) = x^2 - 3x + 5$ evaluate

- (a) f(1)
- (b) f(a+h)

Solution

(a)
$$f(1) = 1^2 - 3 \cdot 1 + 5 = 1 - 3 + 5 = 3$$
.

(b)
$$f(a+h) = (a+h)^2 - 3(a+h) + 5 = a^2 + 2ah + h^2 - 3a - 3h + 5$$
.

Answer

- (a) f(1) = 3.
- (b) $f(a+h) = a^2 + 2ah + h^2 3a 3h + 5$.

Checkpoint 1.2: Finding Domain and Range

Instruction

Find the domain and range for $f(x) = \sqrt{4 - 2x} + 5$.

Solution

i To find the domain of f, we need the expression $4 - 2x \ge 0$, due to that real negative numbers do not have a square root. Solving this inequality, we conclude that the domain is $\{x \mid x \le 2\}$.

ii To find the range of f, we note that since $\sqrt{4-2x} \ge 0$, it follows that $f(x) = \sqrt{4-2x} + 5 \ge 5$. Therefore, the range of f must be a subset of the set $\{y \mid y \ge 5\}$.

To show that every element in this set is in the range of f, we need to show that for all y in this set, there exists a real number x in the domain such that f(x) = y. Let $y \ge 5$. Then, f(x) = y if and only if

$$\sqrt{4-2x}+5=y.$$

Solving this equation for x, we see that x must solve the equation

$$\sqrt{4-2x} = y - 5.$$

Since $y \ge 5$, such an x could exist. Squaring both sides of the above equation we have

$$4 - 2x = (y - 5)^2.$$

Therefore we need

$$-2x = (y-5)^2 - 4,$$

which implies

$$x = 2 - \frac{(y-5)^2}{2}.$$

We just need to verify that x is in the domain of f. Since the domain of f consists of all real numbers less or equal to 2, and

$$2 - \frac{(y-5)^2}{2} \le 2,$$

there does exist an x in the domain of f. We conclude that the range of f is $\{y \mid y \ge 5\}$.

Answer

Domain = $\{x \mid x \le 2\}$, range = $\{y \mid y \ge 5\}$.

Checkpoint 1.3: Finding Zeroes

Instruction

Find the zeroes of $f(x) = x^3 - 5x^2 + 6x$.

Solution

The zeroes of a function are the values of x where f(x) = 0. To find the zeroes, we need to solve

$$f(x) = x^3 - 5x^2 + 6x = 0.$$

Factor out *x*

$$f(x) = x(x^2 - 5x + 6) = 0.$$

We can continue factoring by pure inspection, with the goal of finding a pair of numbers that add up to -5 and whose product is 6. This pair of numbers turns out to be -2 and -3, leading to the factoring

$$f(x) = x(x-2)(x-3) = 0.$$

From the above complete factoring of f, we conclude that there are three zeroes when x is 0, 2, and 3.

Answer

x = 0, 2, 3.

Checkpoint 1.4: Combining Functions Using Mathematical Operations

Instruction

For $f(x) = x^2 + 3$ and g(x) = 2x - 5, find (f/g)(x) and state its domain.

Solution

To find (f/g)(x) we write the function with the quotient operator

$$\frac{f}{g}(x) = \frac{x^2+3}{2x-5}.$$

The domain of this function is $\{x \mid x \neq \frac{5}{2}\}.$

Answer

 $\frac{f}{g}(x) = \frac{x^2+3}{2x-5}$. The domain is $\{x \mid x \neq \frac{5}{2}\}$.

Checkpoint 1.5: Compositions of Functions

Instruction

Let
$$f(x) = 2 - 5x$$
. Let $g(x) = \sqrt{x}$. Find $(f \circ g)(x)$.

Solution

$$(f \circ g)(x) = f(g(x)) = f(\sqrt{x}) = 2 - 5\sqrt{x}.$$

Answer

$$(f \circ g)(x) = 2 - 5\sqrt{x}.$$

Checkpoint 1.6: Application Involving a Composite Function

Instruction

If items are on sale for 10% off their original price, and a customer has a coupon for an additional 30% off, what will be the final price for an item that is originally x dollars, after applying the coupon to the sale price?

Solution

Since the sale price 10% off the original price, if an item is *x* dollars, its sale price is given by

$$f(x) = 0.90x$$
.

Since the coupon entitles an individual to 30% off the price of any item, if an item is *y* dollars, the price after applying the coupon, is given by

$$g(y) = 0.70y$$
.

Therefore, if the price is originally *x* dollars, its price after applying the coupon to the sale price will be

$$(g \circ f)(x) = g(f(x)) = (0.70)0.90x = 0.63x..$$

Answer

$$(g \circ f)(x) = 0.63x.$$

Exercise Solutions

Exercise 1.1.1

Instruction

Assuming the relation in table 1.1.

- (a) Determine the domain and the range of the relation.
- (b) State whether the relation is a function.

| \bar{x} | -3 | -2 | -1 | 0 | 1 | 2 | 3 |
|----------------|----|----|----|---|---|---|---|
| \overline{y} | 9 | 4 | 1 | 0 | 1 | 4 | 9 |

Table 1.1: Relation between *x* and *y* in exercise 1.1.1

(a) The domain of the relation is the set of unique *x* values,

$$\{-3, -2, -1, 0, 1, 2, 3\}.$$

The range of the relation is the set of unique *y* values,

$$\{0,1,4,9\}.$$

(b) This relation is a function, each input is a assigned to exactly one output.

Answer

- (a) Domain = $\{-3, -2, -1, 0, 1, 2, 3\}$, range = $\{0, 1, 4, 9\}$.
- (b) Yes, a function.

Exercise 1.1.2

Instruction

Assuming the relation in table 1.2.

- (a) Determine the domain and the range of the relation.
- (b) State whether the relation is a function.

| \bar{x} | -3 | -2 | -1 | 0 | 1 | 2 | 3 |
|----------------|----|----|----|---|---|---|----|
| \overline{y} | -2 | -8 | -1 | 0 | 1 | 8 | -2 |

Table 1.2: Relation between *x* and *y* in exercise 1.1.2

Solution

(a) The domain of the relation is the set of unique *x* values,

$$\{-3, -2, -1, 0, 1, 2, 3\}.$$

The range of the relation is the set of unique *y* values,

$$\{-8, -2, -1, 0, 1, 8\}.$$

(b) This relation is a function, each input is a assigned to exactly one output.

- (a) Domain = $\{-3, -2, -1, 0, 1, 2, 3\}$, range = $\{-8, -2, -1, 0, 1, 8\}$.
- (b) Yes, a function.

Exercise 1.1.3

Instruction

Assuming the relation in table 1.3.

- (a) Determine the domain and the range of the relation.
- (b) State whether the relation is a function.

Table 1.3: Relation between x and y in exercise 1.1.3

Solution

(a) The domain of the relation is the set of unique *x* values,

$$\{0,1,2,3\}.$$

The range of the relation is the set of unique *y* values,

$$\{-3, -2, -1, 0, 1, 2, 3\}.$$

(b) This relation is not a function, each input is not assigned to exactly one output. Take for example x = 1 that can cause both y = -3 and y = 1.

Answer

- (a) Domain = $\{0,1,2,3\}$, range = $\{-3,-2,-1,0,1,2,3\}$.
- (b) No, not a function.

Exercise 1.1.4

Instruction

Assuming the relation in table 1.4.

- (a) Determine the domain and the range of the relation.
- (b) State whether the relation is a function.

| х | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
|---|---|---|---|---|---|---|---|
| y | 1 | 1 | 1 | 1 | 1 | 1 | 1 |

Table 1.4: Relation between x and y in exercise 1.1.4

(a) The domain of the relation is the set of unique *x* values,

$$\{1,2,3,4,5,6,7\}.$$

The range of the relation is the set of unique *y* values,

{1}.

(b) This relation is a function, each input is a assigned to exactly one output.

Answer

- (a) Domain = $\{1, 2, 3, 4, 5, 6, 7\}$, range = $\{1\}$.
- (b) Yes, a function.

Exercise 1.1.5

Instruction

Assuming the relation in table 1.5.

- (a) Determine the domain and the range of the relation.
- (b) State whether the relation is a function.

| \bar{x} | 3 | 5 | 8 | 10 | 15 | 21 | 33 |
|----------------|---|---|---|----|----|----|----|
| \overline{y} | 3 | 2 | 1 | 0 | 1 | 2 | 3 |

Table 1.5: Relation between x and y in exercise 1.1.5

Solution

(a) The domain of the relation is the set of unique *x* values,

$${3,5,8,10,15,21,33}.$$

The range of the relation is the set of unique *y* values,

$$\{0,1,2,3\}.$$

(b) This relation is a function, each input is a assigned to exactly one output.

- (a) Domain = $\{3, 5, 8, 10, 15, 21, 33\}$, range = $\{0, 1, 2, 3\}$.
- (b) Yes, a function.

Exercise 1.1.6

Instruction

Assuming the relation in table 1.6.

- (a) Determine the domain and the range of the relation.
- (b) State whether the relation is a function.

Table 1.6: Relation between x and y in exercise 1.1.6

Solution

(a) The domain of the relation is the set of unique *x* values,

$$\{-7, -2, 0, 1, 3, 6\}.$$

The range of the relation is the set of unique y values,

$$\{-2, -1, 1, 4, 5, 11\}.$$

(b) This relation is not a function, each input is not assigned to exactly one output. See x = -2, that can cause both y = 1 and y = 5.

Answer

- (a) Domain = $\{-7, -2, 0, 1, 3, 6\}$, range = $\{-2, -1, 1, 4, 5, 11\}$.
- (b) No, not a function.

Exercise 1.1.7

Instruction

Find the below values for the function f(x) = 5x - 2, if they exist, then simplify.

(a) f(0)

- (b) f(1)
- (c) f(3)
- (d) f(-x)
- (e) *f*(*a*)
- (f) f(a+h)

- (a) $f(0) = 5 \cdot 0 2 = 0 2 = -2$.
- (b) $f(1) = 5 \cdot 1 2 = 5 2 = 3$.
- (c) $f(2) = 5 \cdot 3 2 = 15 2 = 13$.
- (d) f(-x) = 5(-x) 2 = -5x 2.
- (e) f(a) = 5a 2.
- (f) f(a+h) = 5(a+h) 2 = 5a + 5h 2.

Answer

- (a) -2.
- (b) 3.
- (c) 13.
- (d) -5x 2.
- (e) 5a 2.
- (f) 5a + 5h 2.

Exercise 1.1.8

Instruction

Find the below values for the function $f(x) = 4x^2 - 3x + 1$, if they exist, then simplify.

- (a) f(0)
- (b) f(1)
- (c) f(3)
- (d) f(-x)
- (e) *f*(*a*)
- (f) f(a+h)

(a)
$$f(0) = 4 \cdot 0^2 - 3 \cdot 0 + 1 = 4 \cdot 0 - 0 + 1 = 0 - 0 + 1 = 1$$
.

(b)
$$f(1) = 4 \cdot 1^2 - 3 \cdot 1 + 1 = 4 \cdot 1 - 3 + 1 = 4 - 3 + 1 = 2$$
.

(c)
$$f(3) = 4 \cdot 3^2 - 3 \cdot 3 + 1 = 4 \cdot 9 - 9 + 1 = 36 - 9 + 1 = 28$$
.

(d)
$$f(-x) = 4(-x)^2 - 3(-x) + 1 = 4x^2 + 3x + 1$$
.

(e)
$$f(a) = 4a^2 - 3a + 1$$
.

(f)
$$f(a+h) = 4(a+h)^2 - 3(a+h) + 1$$

= $4(a^2 + 2ah + h^2) - 3a - 3h + 1$
= $4a^2 + 4h^2 + 8ah - 3a - 3h + 1$.

Answer

- (a) 1.
- (b) 2.
- (c) 28.

(d)
$$4x^2 + 3x + 1$$
.

(e)
$$4a^2 - 3a + 1$$
.

(f)
$$4a^2 + 4h^2 + 8ah - 3a - 3h + 1$$
.

Exercise 1.1.15

Find the domain, range, and all zeros/intercepts, if any, of the function $g(x) = \sqrt{8x - 1}$.

Solution

- i The domain of the square root function is $[0, \infty)$, which implies $8x 1 \ge 0$. Solving for x gives $x \ge \frac{1}{8}$.
- ii To find the range of g, we note that $\sqrt{8x-1} \ge 0$. Therefore, the range of g must be a subset of the set $\{y \mid y \ge 0\}$. To show that every element in this set is in the range of g, we need to show that for a given g in this set, there exists a real number g in the domain such that g(g) = g.

Let
$$y \ge 0$$
. Then $g(x) = y$ if and only if

$$\sqrt{8x-1}=y.$$

We are interested in x, and will solve this equation for x. Since $y \ge 0$ such an x could exist. Squaring both sides of this equation, we have

$$8x - 1 = y^2$$
.

Therefore, we need

$$8x = y^2 + 1,$$

which implies

$$x = \frac{y^2 + 1}{8}.$$

We just need to verify that x is in the domain of g. Since the domain of g consists of all real numbers greater than or equal to 1/8, and

$$\frac{y^2+1}{8}\geq \frac{1}{8},$$

there does exist an x in the domain of g. We conclude that the range of g is $\{y \mid y \ge 0\}$.

- iii To find the zeroes, solve $g(x) = \sqrt{8x 10}$. We discover that g have one zero at x = -1/8.
- iv The y-intercept is given by (0, g(0)). Since x = 0 isn't in the domain of g, it follows that that there aren't any intercepts.

Answer

Domain = $x \ge \frac{1}{8}$, range = $\{y \mid y \ge 0\}$, zeroes x = -1/8, no intercepts.

Exercise 1.1.23

Sketch the graph for the function f(x) = 3x - 6 with the aid of table 1.7.

| \bar{x} | -3 | -2 | -1 | 0 | 1 | 2 | 3 |
|----------------|-----|-----|----|----|----|---|---|
| \overline{y} | -15 | -12 | -9 | -6 | -3 | 0 | 3 |

Table 1.7: Relation between *x* and *y* in exercise 1.1.23

Solution

Begin by sketching the axes. We choose the same scale on both axes to not distort the graph. We choose the range for both axes to be -15 to 15, allowing us to plot all the points from table 1.7, see figure 1.1.

Figure 1.1: Empty graph with just the axes

After having sketched the axes we add markers based on the data in table 1.7, see figure 1.2.

Figure 1.2: Graph with added markers

We then connect the markers with line segments. In this particular case the result will be a single straight line so we can use a ruler when sketching, , see figure 1.3.

Figure 1.3: Graph with connected markers

Figure 1.4: Answer to exercise 1.1.23

Exercise 1.1.29

Use the vertical line test to determine whether the graph in figure 1.5 represent a function. Assume that the graph continues at both ends beyond the given grid. If the graph represents a function, then determine the following for the graph:

- (a) Domain and range
- (b) *x*-intercept, if any (estimate where necessary)
- (c) *y*-intercept, if any (estimate where necessary)
- (d) The intervals for which the function is increasing

- (e) The intervals for which the function is decreasing
- (f) The intervals for which the function is constant
- (g) Symmetry about any axis and/or the origin
- (h) Whether the function is even, odd, or neither

Figure 1.5: Graph for exercise 1.1.29

The graph in figure 1.5 do represent a function because every vertical line that may be drawn intersects the graph no more than once. See figure 1.6 for an example of a vertical line with one intersection of the graph. We could slide this line over the entire graph and there would always only be at most one intersection.

Figure 1.6: Vertical line test illustration

- (a) i The function seems to grow rapidly as x goes towards $\pm \infty$, but there will still always be a y value. We conclude that the domain is all real numbers.
 - ii *y* is always greater or equal to 0, this is the range.
- (b) y is zero for x = -1, and x = 1, these are the x-intercepts.
- (c) The *y*-intercept is y = 1.
- (d) The function is increasing for the intervals -1 < x < 0 and $1 < x < \infty$.
- (e) The function is decreasing for the intervals $-\infty < x < -1$ and 0 < x < 1.
- (f) The function changes from decreasing/increasing when x is -1, 0, and 1, but there are no intervals for which the function is constant.
- (g) (-x,y) is on the graph whenever (x,y) is on the graph, in other words the function is symmetric around the y-axis.
- (h) The function is not odd because $f(-x) \neq -f(x)$ for all x in the domain. Take for example x = 0.5 for which $f(-x) \approx 0.6$ and $-f(x) \approx -0.6$.
 - The function is even because f(-x) = f(x) for all x. Take for example x = 0.5 for which $f(-x) \approx 0.6$ and $f(x) \approx 0.6$.

Graph represents a function.

- (a) Domain: all real numbers, range: $y \ge 0$.
- (b) x = -1 and x = 1.
- (c) y = 1.
- (d) -1 < x < 0 and $1 < x < \infty$.
- (e) $-\infty < x < -1$ and 0 < x < 1.
- (f) Not constant.
- (g) y-axis.
- (h) Even.

Exercise 1.1.37

Instruction

For the pair of functions f(x) = x - 8 and $g(x) = 5x^2$, find each of the below new functions. Also determine the domain for each of these new functions.

- (a) f + g
- (b) f g
- (c) $f \cdot g$
- (d) f/g

Solution

(a) Add the two given functions to form the requested function,

$$f + g = x - 8 + 5x^2 = 5x^2 + x - 8.$$

The domain of the above new function is all real numbers.

(b) Subtract the two given functions to form the requested function,

$$f - g = x - 8 - 5x^2 = -5x^2 + x - 8.$$

The domain of the above new function is all real numbers.

(c) Multiply the two given functions to form the requested function,

$$f \cdot g = (x - 8)5x^2 = 5x^3 - 8x^2.$$

The domain of the above new function is all real numbers.

(d) Divide the two given functions to form the requested function,

$$\frac{f}{g} = \frac{x - 8}{5x^2}.$$

The division is defined except for for x = 0, the domain is hence $x \neq 0$.

Answer

- (a) $5x^2 + x 8$, domain: all real numbers.
- (b) $-5x^2 + x 8$, domain: all real numbers.
- (c) $5x^3 8x^2$, domain: all real numbers.
- (d) $\frac{x-8}{5x^2}$, domain: $x \neq 0$.

Exercise 1.1.43

Instruction

For the pair of functions f(x) = x + 4 and g(x) = 4x - 1, find the below listed compositions. Simplify the results. Find the domain of each of the results.

- (a) $(f \circ g)(x)$
- (b) $(g \circ f)(x)$

Solution

(a) The composition is given by

$$(f \circ g)(x) = f(g(x)) = (4x - 1) + 4 = 4x - 1 + 4 = 4x + 3.$$

The domain of the above composition is all real numbers.

(b) The composition is given by

$$(g \circ f)(x) = g(f(x)) = 4(x+4) - 1 = 4x + 16 - 1 = 4x + 15.$$

The domain of the above composition is all real numbers.

- (a) 4x + 3, domain: all real numbers.
- (b) 4x + 15, domain: all real numbers.

Exercise 1.1.49

Instruction

Table 1.8 lists the NBA championship winners for the years 2001 to 2012.

| Year | Winner |
|------|-------------------|
| 2001 | La Lakers |
| 2002 | La Lakers |
| 2003 | San Antonio Spurs |
| 2004 | Detroit Pistons |
| 2005 | San Antonio Spurs |
| 2006 | Miami Heat |
| 2007 | San Antonio Spurs |
| 2008 | Boston Celtics |
| 2009 | La Lakers |
| 2010 | La Lakers |
| 2011 | Dallas Mavericks |
| 2012 | Miami Heat |
| | |

Table 1.8: NBA championship winners for the years 2001 to 2012

- (a) Consider the relation in which the domain values are the years 2001 to 2012 and the range is the corresponding winner. Is this relation a function? Explain why or why not.
- (b) Consider the relation where the domain values are the winners and the range is the corresponding years. Is this relation a function? Explain why or why not.

Solution

- (a) The relation in which the domain values are the years and the range is the corresponding winner is a function because a given year have only one winner. This functions set of inputs is the years 2001 to 2012 and the output is a team name. The rule for assigning each input to exactly one output is defined by table 1.8.
- (b) The relation where the domain values are the winners and the range is the corresponding years is not a function because there are teams that have won more than once during the years. A function shall have a rule for assigning each input to exactly one output. In this case we cannot deduce exactly one year from just knowing a team name.

- (a) Yes, a function.
- (b) No, not a function.

Exercise 1.1.51

Instruction

The volume of a cube depends on the length of the sides *s*.

- (a) Write a function V(s) for the volume of the cube.
- (b) Find an interpret V(11.8).

Solution

(a) A cube will have sides *s* of equal length. The volume is found by multiplying *s* three times

$$V(s) = s \cdot s \cdot s = s^3$$
.

(b) A cube with the side equal to 11.8 length units will have the volume

$$V(11.8) = 11.8^3 \approx 1643$$

cubic units.

Answer

- (a) $V(s) = s^3$.
- (b) $V(11.8) = 11.8^3 \approx 1643$ cubic units.

Exercise 1.1.53

Instruction

A vehicle has a 20-gal tank and gets 15 mpg. The number of miles N that can be driven depends on the amount of gas x in the tank.

- (a) Write a formula that models the situation.
- (b) Determine the number of miles the vehicle can travel on (i) a full tank of gas and (ii) 3/4 of a tank of gas.
- (c) Determine the (i) domain and (ii) range of the function.
- (d) Determine how many times the driver had to stop for gas if she has driven a total 578 miles.

- (a) A gallon makes the vehicle go 15 miles. This information leads to that the number of miles N that can be driven on x gallons of gas is N(x) = 15x. This is formula is a function because it maps each input to exactly on output.
- (b) (i) A full tank holds 20 gallons. This is our known x, that we can use in the formula from above. The number of miles that can be traveled is $N(20) = 15 \cdot x = 15 \cdot 20 = 300$ miles.
 - (ii) 3/4 of the tank is 15 gallons. Again, this is our known x, that we can use in the formula from above. The number of miles that can be traveled is $N(15) = 15 \cdot x = 15 \cdot 15 = 225$ miles.
- (c) (i) The domain of the function is all the different amount of gas that is possible to put in the tank, from empty to full, $0 \le x \le 20$.
 - (ii) The function between the amount of gas and miles traveled is a linear relation. The more gas we have the further we can travel. With an empty tank we can travel $N(0) = 15 \cdot x = 15 \cdot 0 = 0$ miles. With an full tank we can travel $N(20) = 15 \cdot x = 15 \cdot 20 = 300$ miles. When we have something in between the extreme values in the tank we will be able to travel in between 0 and 300 miles. The range of the function is hence [0,300].
- (d) We start bay calculating the number of gallons of gas required for the trip. We solve N=15x for x by dividing both sides by 15, x=N/15. We now have a relation describing number of gallons per distance. Plug in the known distance to calculate number of gallons required, $x=578/15\approx 39$ gallons. If assuming that the trip was started with a full tank, holding 20 gallons, we conclude that the driver was 39-20=19 gallons short. 19 being less than one full tank means that driver had to stop at least one time during the trip to fill up the tank.

Answer

- (a) N(x) = 15x.
- (b) 300 miles can be traveled on a full tank of gas. 225 miles can be traveled on 3/4 of a full tank of gas.
- (c) Domain: $0 \ge x \ge 20$, range: [0,300].
- (d) The driver had to stop for gas refill at least once.
